

## WILLIAMSTON MAN HAD NEARLY GIVEN UP HOPE

McClellan Tells of Very Hard Year  
He Spent.

COULDN'T GO AT ALL

Is Back on Pay Roll Now and Work-  
ing Steadily—Gives Detail.

"I suffered from a very weak condition and what I was told was threatened paralysis, but I took seven or eight bottles of Tanlac and I'm in len shape now," declared J. L. McClellan, of Williamston, S. C., in a statement he gave in endorsement of Tanlac. "I had become so weak I could not go about at all and for a year I was in that condition. I had no appetite, never felt well and got no better to amount to anything, even though I was under treatment, and I had begun to think I never would get back in good shape again.

"But the Tanlac gave me the results and I'm much stronger now and I'm working regularly at night. I have a very fine appetite, too. Soon after I began taking Tanlac I began to fatten up right along. I am glad to recommend Tanlac, for it got me back on my feet and proved to me just the medicine I needed."

Tanlac, the Master Medicine, is sold by Dickson's Drug Store, Manning; L. W. Nettles, Jordan; Shaw & Plowden, New Zion; Farmers' Supply Co., Silver; D. C. Rhame, Summerton.—Adv.

## THE ARMY WORM CONTROL METHODS

Clemson College, S. C., June 25.—When this pest is confined to vetch or grass a deep furrow can be plowed around the field and when the worms pile up in the furrow drag a log through it. Poison the adjoining margins of corn and cotton fields. Graze the infested area heavily. If the ground is level use heavy roller. If a road or driveway separates the infested from the threatened crop, use drag in killing the caterpillars when crossing. Cut and cure the infested grass for hay if far enough advanced and plow and plant another crop.

When they attack cotton and corn these should be dusted with arsenate of lead powder. For this an ordinary flour sack from which the starch has been removed, can be used. It may be tied to the end of a stick. For large areas a sack is attached to each end of a pole and the operator rides on horse back when applying it. It is made as follows:

A strip of wood three inches wide, one inch thick and one foot longer than width of rows. Six inches from each end bore a hole one inch or more in diameter. Make two sacks of eight ounce duck six inches deep and twenty inches long and about the width of the strip of wood. The open sides are tacked to the ends of the strip (called pole) and these can be filled with poison through the auger hole in the ends of the pole. A funnel can be used to advantage. Flour sacks having no starch are excellent. One man can poison about 20 acres per day with this apparatus.

The best time to apply poison is in the morning when the dew is on. The sacks should not touch the foliage especially when the dew is on, as it will clog. One can regulate the amount by judiciously varying the amount of jarring of the pole. It is important that the dusting is uniform. It is rarely necessary to repeat dusting of Arsenate of Lead after a rain.

The amount of poison necessary is about two pounds per acre for very young cotton and two and one-half to three pounds for cotton over three feet high.

Arsenate of Lead powder may be dusted pure while Paris Green should be mixed equal parts with air slackened lime. Arsenate of Lead does not burn the leaves while Paris Green frequently does. The amount dusted can be determined by weighing before and after dusting a small definite area.

## PEACH TREE BORER

Clemson College, S. C., June 25.—Mound, that is pull up the earth around the base of the trees to a height of eight inches during the first week in July. Level this mound about October 25th.

What is the Peach Tree Borer?  
A whitish grub that works in the crown of the trunk just below the ground.

How can I tell when I have this borer in my trees?

## CASTORIA

For Infants and Children  
In Use For Over 30 Years  
Always bears  
the  
Signature of *Chas. H. Hitchins*

By the gum that collects at the base of the trees.  
Does this borer work in the fruit or branches?

No.

What is the worm that works in the fruit?

The grub of a snout beetle known as curculio.

What are the little shot holes in the bark?

They are made by the shot hole borer, a small black beetle which attacks almost entirely sick or neglected trees.

What is the parent of the peach tree borer?

A clean-winged moth, or miller. Why mound during the first week of July?

Because about July 1st, the borers come out of the trees make their cocoons near the tree beneath the surface of the soil. The parent moth when hatched can not penetrate through an inch of earth. When the tree is mounded the moth remains a prisoner and dies.

Are trunk washes good?

Yes, when used just before mounding. The trunks are painted with lime sulphur wash or with the tree trunk wash as described in circular 25 sent on request.

Has the mounding been tried and found effective?

Yes, for a period of six years, and it is very effective.

## NECESSITY FOR SAVING SEED

Clemson College, S. C., June 25.—The grain crop this year is so short that there will be a great demand for seed this fall, and seed will be hard to get except at high prices. The farmers, therefore, who have any wheat should make every effort possible to preserve this in good condition for fall planting, or for sale as seed, if there is more than enough for his own use. By cleaning the grain thoroughly, and placing it in a room or bin, built so as to permit the use of carbon bisulphide, all rats and weevils can be destroyed, and the grain kept in good condition for seed. Carelessness in this matter will cause many to have to pay high prices for seed in the fall. All seeds raised on the farm, such as the farmer can save for use for the next crop, should be taken care of so that they will not be damaged. Not only for one's own sake, but for the sake of others, who have no grain crop from which to save seed. A tight crib, and one which is rat proof, will aid greatly in helping the farmer to save all seeds in good condition. If there is not enough room in the crib, then tight bins should be built in the barns, or elsewhere, and these used for the storage of grain seeds. Carbon Bisulphide will kill the weevils. Detailed information will be furnished to all who write for information in regard to saving seeds.

The oat crop in the state is the lightest in several years, and it is extremely important that all farmers, having good fields of oats save as many as possible for seed purposes this fall. The demands for seed oats this fall will probably be very heavy, and it may be impossible to get them except at very high prices.

## TOBACCO AT KINGSTREE

The first load of tobacco of the season to be brought to this market was received at the Nelson Warehouse from H. A. Miller, who has been the first man on the market for the past three years.

## ORANGEBURG PACKING HOUSE TO OPEN EARLY THIS FALL

Clemson College, S. C., June 25.—The opening of the new Packing House in Orangeburg early this fall will furnish a ready market for all stock. This will be of great help to the farmers of the state, and they should do all they can to make it a success. The plant will pay the market price for hogs that are well finished. The farmers can do a lot for themselves and toward aiding to make the plant a success if they will plant a variety of grazing crops, etc., in order that they can produce more hogs, better hogs, and at less expense. In growing more feed stuffs, they can make the pork for less cost and so make greater net returns.

## The Beauty Secret.

Ladies desire that irresistible charm—a good complexion. Of course they do not wish others to know a beautifier has been used so they buy a bottle of

## Magnolia Balm LIQUID FACE POWDER

and use according to simple directions. Improvement is noticed at once. Soothing, cooling and refreshing. Heals Sunburn, stops Tan.

Pink, White, Rose-Red.  
75c. at Druggists or by mail direct.  
Sample (either color) for 2c. Stamp.

# NEW SPRING CLOTHES

---Modelled to the Young  
Man's mind---and made  
to our Standard

Here's a Suit—or rather  
a line of Suits—on  
which we have put the  
best thought and buying  
ability that we possess.

There's quality in the  
fabric; quality in the  
hand-tailoring; quality in  
the fine silk thread; qual-  
ity in the style.

Made by Schloss Bros.  
& Co., the famous Young  
Men's tailors—leaders in  
style for almost half a  
century.

Their guarantee, and  
ours—goes with every  
Suit.

\$17.50 to \$30.00

THE  
NEW IDEA  
CO.

MORSIS INESS,  
Manager.
